Japanese Patent Application Laid-Open No. 2-502076, which is listed as reference number three (3) in the accompanying Form PTO/SB/08 Substitute, is submitted for the relevance, if any, of what its figures fairly disclose. The Applicants note that this reference was cited by the Japanese Patent Office in a related application. Moreover, this reference is the Japanese nationalization of the PCT International Application that published as WO 89/04678, which is listed as reference number seven (7) in the accompanying Form PTO/SB/08 Substitute.

Japanese Patent Application Laid-Open No. 9-506533, which is listed as reference number four (4) in the accompanying Form PTO/SB/08 Substitute, is submitted for the relevance, if any, of what its figures fairly disclose. The Applicants note that this reference was cited by the Japanese Patent Office in a related application. Moreover, this reference is the Japanese nationalization of the PCT International Application that published as WO 95/16389, which is listed as reference number eight (8) in the accompanying Form PTO/SB/08 Substitute.

Japanese Patent Application Laid-Open No. 59-160441, which is listed as reference number five (5) in the accompanying Form PTO/SB/08 Substitute, is submitted for the relevance, if any, of what its figures fairly disclose. Japanese Utility Model Application Laid-Open No. 7-24307, which is listed as reference number six (6) in the accompanying Form PTO/SB/08 Substitute, is submitted for the relevance, if any, of what its figures fairly disclose. The Applicants note that this reference was cited by the Japanese Patent Office in a related application. Based on an English-language interpretation of the remarks of the Japanese Patent Office, which the Applicants have not independently verified and thus make no admissions with respect to the same, it appears that the Japanese Patent Office alleges that this reference discloses the "connection of a needle to

a fine tube through a hub, provision of a fixing wing, and connection of a second needle to a distal end of the fine tube, remote from the needle hub.”

DATED this 13th day of April, 2009.
